Care for your Cloverland Greenhouse plants after you get them home:

As these plants have lived in a pampered environment for the past several months, they need to be hardened off before you plant them.

To harden off your plants, first place them in an outdoor area that is shaded and out of the direct wind. Then, each day, for the next several days (5 days), move your plants into a little

After the fifth day, you may plant your plants with confidence that they will do well in their new home.

Please remember to keep your plants watered during the hardening off.

If your plants are in our CowPots, there is no need to remove or modify the pots. The CowPots are to be directly planted with the pot's soil level even with the surrounding soil level. The plant's roots will grow right through the pot walls and the pot will break down very quickly in the outdoor environment. The use of CowPots greatly reduces any transplant shock and reduces the amount of plastics in our environment.

Useful terminology found in our Plant List:

- Full sun means at least 9 hours of direct sunlight.
- Partial sun means at least 5 hours of direct sunlight or diffused sunlight throughout the day.
- Shade means no direct sunlight.
- Soil moisture is best understood if you assume a normal garden soil is regarded as Moist.
- Dry soils or wet soils would bracket the moist soil condition.
- Deer resistant does not mean the deer will not eat your plants! Deer resistant means the discriminating deer would prefer other plants to eat before they choose to eat yours.

2026 Cloverland Farms Plant List

#	Perennial Name	Moisture	Sunlight	Height	Spacing	Deer Resistant	Cost
1	Madonna Anemone	Moist	Part to Full Sun	9"-12"	16"	Yes	\$2
